Master's student in Electrical and Information Technology, specializing in Automation and Robotics at Hochschule Darmstadt. I have three years of experience working with AVEVA Engineering and Electrical administration. Actively looking for a working student or mandatory internship position, with the goal of continuing into a thesis opportunity.

🎓 EDUCATION

09/2024 – present	Master of Science (M.Sc) Electrical and Information Technology Darmstadt University of Applied Sciences • Safety In Industrial Automation • Adaptive Control, Modelling and Identification • Industrial Robotics • Advanced Programming Techniques • Computer Vision • State Space Analysis • Human Machine Interface • Project Management	Darmstadt, Germany
07/2017 – 09/2021	Bachelor of Engineering (B.E) Electrical and Electronics The National Institute of Engineering Grade: 8.12 CGPA	Mysore, India

💼 PROFESSIONAL EXPERIENCE

02/2024 – 08/2024	J. Ray McDermott Engineering Services Private Ltd Associate System Engineer - AVEVA Electrical Administrator V12 • Administered AVEVA Electrical V12 for Ruya EPCIC offshore projects 11 & 13, delivering 50+ electrical datasheets and drawings on time. • Standardized project workflows that reduced rework hours and improved inter-team coordination. • Led tool training sessions, reducing internal troubleshooting incidents by 30% within 5 months.	Chennai, India
09/2021 – 02/2024	Infosys Ltd. Senior System Engineer - AVEVA Engineering V15 Electrical & Instrumentation Administrator • Led the administration and optimization of AVEVA Engineering 15.x for Electrical and Instrumentation projects. • Acted as Scrum facilitator, promoting Agile practices and coordinating sprint reviews, retrospectives, and daily stand-ups. • Managed overall application architecture, operations, and system maintenance for engineering tools. System Engineer • Configured libraries and settings, including TAS, I/O cards, wiring rules, instruments, and cable catalogs. • 50+ User Story deliverables (Electrical Load list, Cable Schedule, Reports, Datasheets, and Drawings). • Developed data model with classes, attributes, associations, LOVs database views, and Kraftwerk Kennzeichen System naming conventions. • Mentored 8 new engineers via recurring technical sessions on AVEVA Suite. • Performed various architectural activities like project handling, Builds, deployment, and set-up applications.	Mysore, India

07/2019 – 07/2019	Arkay Energy Ltd. Electrical Operations and Maintenance Intern - Supported commissioning/testing of substation systems and carried out electrical maintenance tasks. - Gained practical insights into industrial safety and troubleshooting.	Ramanathapuram, India
06/2019 – 06/2019	LARSEN AND TOUBRO ELECTRICALS Electrical Commissioning Intern - Collaborated on commissioning activities related to electrical systems. - Included activities like setting up and testing electrical and electronic components, troubleshooting issues, and ensuring that all systems were functioning optimally.	Khargone, India

SKILLS

- Engineering Tools: AVEVA Engineering v15.x, AVEVA Electrical v12, Jira, Rally, Software testing,
- Programming: Python , C++ , SQL
- Basics, Image Processing, LiDAR, Point Cloud Processing.
- Power Engineering: Power System Testing , Single Line Diagrams, Logical Diagrams, Wiring Diagrams & Schematics
- Soft Skills: Project Management, Agile/Scrum, Team Collaboration, Technical Training, Troubleshooting
- Professional Skills: MS Office, Safety in the Utility Industry, Operations and Maintenance, Commissioning
- Automation & Controls: TIA Portal, Siemens S7 Safety, PLC Programming, SISTEMA, Industrial Internet of Things (IIoT)
- Control System: Matlab , Simulink

PROJECTS

LiDAR-Based Indoor Scene Analysis

LiDAR-Based Indoor Scene Analysis using a Hesai XT16 LiDAR mounted on a quadruped robot. The project focuses on extracting meaningful features from indoor environments by combining classical statistical methods with machine learning-based point cloud segmentation. Responsibilities include data preprocessing, feature extraction, and model development using Python and ROS.

Advanced Programming Technique Lab Projects

- BattleShip Game:** Developed a console-based Battleship game in C++ to enhance programming skills, focusing on game logic and user interaction.
- Student Database:** Developed and designed an optimized database system for university enrollment using C++ (object-oriented programming), ensuring efficient data management and retrieval.
- Reversi Board Game:** Implemented a console-based Reversi board game in C++ to strengthen algorithmic thinking and data handling.

Modeling, Simulation and Performance Analysis of Hybrid Electric Vehicle

The study focused on modeling, simulation, and performance analysis of HEVs, exploring the integration of electric and conventional powertrains. It provided insights into optimizing energy efficiency, emissions reduction, and fuel economy under different driving conditions.

Line Follower Robot With Obstacle Detection

The project aimed to implement the algorithm and control the movement of the robot by properly tuning the control parameters, thus achieving better performance. It could be used for industrial automated equipment carriers, small household applications, museum tour guides, and other similar applications.
